

Release Summary

Product: Nodegent**Team:** Nodegent — CSE 115A Spring 2026**Release Date:** June 26, 2026**Version:** V1.0

Key User Stories and Acceptance Criteria

Selected user stories spanning all eight sprints (V1: Sprints 1–4, V2: Sprints 5–8). These represent the most impactful features of Nodegent and serve as the basis for acceptance testing.

ID	Sprint	User Story	Acceptance Criteria
US-1.7	Sprint 1	As a student, I want to know that my credentials are being handled securely.	• All secrets stored via environment variables — nothing hardcoded. • Canvas cookies and OAuth tokens stored server-side only. • Client never receives raw credentials in any API response.
US-2.2	Sprint 2	As a student, I want Nodegent to read my enrolled courses and upcoming assignments from Canvas so I have a single view of my workload.	• Enrolled courses and assignments appear after Canvas authentication. • Assignment titles, due dates, and course associations are accurate. • Canvas cookies are never exposed to the client. • Duo MFA interaction is supported during auth flow.
US-2.3	Sprint 2	As a student, I want a dashboard showing all my upcoming assignments in priority order.	• All synced assignments display with title, course, and due date. • Sorted by soonest due date; overdue items are visually flagged. • User can mark assignments as complete.
US-3.1	Sprint 3	As a student, I want to chat with an AI assistant that already knows my courses, assignments, and schedule.	• AI answers campus-aware questions using live Convex data. • LLM calls are server-side; API keys never reach the browser. • All AI actions are recorded in the audit log.
US-3.2	Sprint 3	As a student, I want to connect my Google Calendar and have Nodegent automatically create events for my deadlines and exams.	• User connects Google Calendar via OAuth without leaving the app. • Assignment due dates and exams appear as calendar events post-

ID	Sprint	User Story	Acceptance Criteria
			sync. Re-syncing does not create duplicate events.
US-4.1	Sprint 4	As a student, I want to see a clear activity log of everything Nodegent has done on my behalf.	- Log is accessible from the dashboard. - Every Canvas sync, AI query, and calendar action is recorded with a timestamp. - Log entries include user identity and cannot be modified client-side.
US-4.2	Sprint 4	As a student, I want to pause or revoke access to any connected system instantly.	- Revoke controls are visible for each connected system. - Revocation takes effect immediately with no further API calls made. - Revocation is recorded in the activity log.
US-5.2	Sprint 5	As a student, when I sign in I want an OS-style animated loading screen before entering the dashboard.	- Fullscreen loading screen shown on initial sign-in using Framer Motion. - Screen persists while courses, assignments, and user profile load from Convex. - Transitions out with a smooth fade once data is ready. - Does not reappear on subsequent in-app navigation.
US-5.5	Sprint 5	As a student, I want Canvas and Google Calendar to sync automatically in the background when I sign in.	- Canvas sync triggers on session start if canvasEnabled is true and credentials are stored. - Google Calendar sync triggers if calendarEnabled is true and tokens are stored. - Syncs are non-blocking; errors surface in the status chip.
US-6.1	Sprint 6	As a student, I want a persistent app dock with quick navigation to all major sections of Nodegent.	- Dock includes default apps: Dashboard, AI Chat, Calendar, Courses, Campus Sync, Security & Access, SlugSchedule (UCSC only). - Active section is visually indicated. - Users can add custom apps (name, URL, icon) stored per-user in Convex. - Custom apps open in a new tab.
US-6.5	Sprint 6	As a student, I want my assignments grouped by course in a collapsible view so I can focus on one course at	Each course row shows course name, pending assignment count,

ID	Sprint	User Story	Acceptance Criteria
		a time.	- and next due date. - Expanding a course lists its assignments with urgency badges and a completion toggle. - Completed assignments are hidden by default with a 'Show completed' toggle.
US-7.1	Sprint 7	As a student at any university, I want to select my institution during onboarding so Nodegent uses the correct Canvas URL for my school.	- University search/select field presented on first sign-in. - Canvas base URL derived from selected university. - UI copy (e.g., CruzID vs. CalNet ID) adapts based on stored university. - User can update their university in Settings.
US-7.6	Sprint 7	As a student, I want to see my grade on each assignment once it has been graded.	- Assignment cards show earned points / total points if graded. - Courses panel displays computed course grade percentage if available. - Data pulled from Canvas API during sync; stored in score and letterGrade fields.
US-8.1	Sprint 8	As a student, I want a weekly AI-generated summary of my upcoming workload on Monday mornings.	- Digest triggers on first dashboard load of the week. - AI summarizes upcoming deadlines, overdue items, and exams in 3–5 sentences. - Digest generation is logged in the audit log. - Shown only once per week (tracked via lastDigestAt on the users table).
US-8.7	Sprint 8	As a student, I want Nodegent to be accessible remotely through a browser	- Frontend deployed to Vercel with all environment variables configured. - Production Convex deployment wired to Vercel production environment. - Clerk allowed origins and redirect URLs configured for the production domain. - Preview deployments enabled for pull requests.

Known Problems

Known issues at time of release. Failures arising from these problems will not be penalized during the project review.

#	Type	Description	Impact
K P- 1	Omission	Canvas SSO requires manual Duo MFA approval. If not approved in time, the auth flow stalls and must be restarted.	Canvas sync unavailable until re-auth.
K P- 2	Omission	Canvas session cookies expire (24–48 hrs) with no automatic refresh. User must re-run the full Canvas auth flow after expiry.	Periodic manual re-authentication required.
K P- 3	Omission	Assignment sync is batch-based. Assignments posted between syncs do not appear until the next sync is triggered.	New assignments may lag by several hours.
K P- 4	Design Shortcut	Platform is hard-coded for UCSC in V1. Multi-university support is addressed in US-7.1 (V2, Sprint 7).	Non-UCSC students cannot use V1.
K P- 6	Bug	Playwright-based Canvas auth worker is incompatible with Edge Runtime and may time out on serverless hosts without Vercel Fluid Compute configuration (addressed in US-8.7).	Canvas auth may fail on default serverless deployments.
K P- 7	Design Shortcut	User preferences (theme, widget layout, wallpaper) are stored in localStorage. Clearing browser data or switching devices resets all preferences.	Preferences are not portable across devices.

Product Backlog

High-priority items deferred beyond the current release scope, serving as the starting point for a follow-on project.

ID	User Story	Notes
US-7.4	As a student, I want to toggle individual courses into or out of Google Calendar sync, rather than syncing all or nothing.	Adds per-course toggle; stored in Convex.
US-8.2	As a student, I want a built-in Pomodoro focus timer tied to a specific assignment.	Local timer state only; logs completed sessions to audit log.
US-B4	As a student, I want Nodegent to detect when I am falling behind across multiple classes so I can adjust early.	Requires predictive modeling — long-term AI feature.
US-B5	As a student, I want Nodegent to suggest a study schedule	Schedule inference out of
