

Heading: Release Plan, Nodegent, Release Plan V.1, Release Date: 06/26,
Revision 1: 04/11/26.

High Level Goals:

1. Unified Campus Frame - Students can sign in and see all their enrolled courses, upcoming assignments, and major deadlines in a single dashboard interface, pulling from Canvas and other LMS data.
2. AI-Assisted Planning - Students can interact with a built-in AI assistant (using their existing OpenAI/Anthropic subscriptions) that is already aware of their campus data and can answer questions such as “What’s due this week?” or “When’s the next exam?” without manual input.
3. Calendar Sync Automation - Students can easily send their assignment due dates and exam dates into their Google Calendar so they never miss a deadline.
4. Transparency & Agent Accountability - Students can see exactly what Nodegent has read or done on their behalf, add/revoke access at any time, and trust that the system is not acting beyond its intended scope.
5. Easy and immediate access to real time campus information - Students can plan their meals at dining halls as per what's being served and nutritional requirements, decide if it makes sense to go to the gym, and if the bus is running late.
6. Enrollment planning - Students can view real time waitlist information to make detailed decisions about what courses they want to enroll in and if it builds towards their degree requirements.
7. Leisure & recreation - Students can view events on and around campus; slugs can check surf conditions!

User Stories by Sprint:

Story point scale: 1 = trivial, 2 = small, 3 = medium, 5 = large, 8 = very large

Team capacity estimate: ~4-5 developers x ~6-8 hrs/week = ~30-40 story points/sprint

Sprint duration: 2 weeks each (4 sprints total, Sprints 2-4 are development sprints)

Sprint 1 - Planning, Research & Architecture Outline

Goal: Finalize release plan, project proposal, initial presentation, and core architecture decisions for Nodgent.

Priority	ID	User Story	Story Points
1	US-1 .1	As a student, I want a finalized release plan document so that we have an agreed-upon scope and timeline for the quarter.	2
2	US-1 .2	As a student, I want to deliver an initial project presentation so that my professor, TA, and classmates understand what Nodgent does and can give early feedback.	2
3	US-1 .3	As a student, I want a documented system architecture and tech stack decision so that we can begin development in Sprint 2 without major redesigns.	3
4	US-1 .4	As a student, I want to conduct at least 5 informal student interviews or a short survey to ask both classmates and students outside to verify if our assumed workflows are solving their needs before building.	2
5	US-1 .5	As a student, I want a documented legal framework for the class prototype to answer how Nodgent handles student data without violating university student data protection policies.	2
6	US-1 .6	As a student, I want accessible features through the platform via a chat interface.	3
7	US-1	As a student, I want to know that my credentials are being	2

	.7	handled securely by Nodegent	
--	----	------------------------------	--

Sprint 1 Total: 16 story points

Sprint 2 - Core Infrastructure: Auth, Frontend, Data Layer, & LMS Integration

Goal: Students can sign in and see their courses and assignments from connected LMS and SIS platforms such as Canvas and MyUCSC.

Priority	ID	User Story	Story Points
1	US-2 .1	As a student, I want to sign in to Nodegent using my campus/Google credentials so that my experience is personalized and my data is secure.	3
2	US-2 .2	As a student, I want Nodegent to read my enrolled courses and upcoming assignments from Canvas and MyUCSC so that I have a single view of my academic workload.	5
3	US-2 .3	As a student, I want to see a dashboard that displays all my upcoming assignments and due dates in priority order so that I can understand what needs attention.	3
4	US-2 .4	As a student, I want to access my courses, assignments, and events each time I log in with consistent updates (database schema created) so that all future features have a working data layer to build on.	3
5	US-2 .5	As a student, I want Nodegent to show me a "Daily Snapshot" of what's happening today (classes, due items, events) so that I can my day at a glance.	3

Sprint 2 Total: 17 story points

Sprint 3 - AI Assistant & Calendar Sync

Goal: Students can talk to an AI assistant that knows their campus data and can sync deadlines to their calendar.

Priority	ID	User Story	Story Points
1	US-3 .1	As a student, I want to chat with an AI assistant inside Nodegent that already knows my courses, assignments, and schedule so that I can ask questions and get accurate, campus-aware answers.	8
2	US-3 .2	As a student, I want to connect my Google Calendar and have Nodegent automatically create events for all my assignment due dates and exams so that I never miss a deadline.	5
3	US-3 .3	As a student, I want Nodegent to detect when new assignments are posted and notify me with a summary so that I am never caught off guard by a late addition.	3
4	US-3 .4	As a student, I want to choose which systems Nodegent can access (LMS, SIS, calendar) using simple on/off toggles so that I remain in control of my data at all times.	2

Sprint 3 Total: 18 story points

Sprint 4 - Design Polish, Agent Guardrails, Audit Log & Demo Prep

Goal: Ship a finalized, robust product ready for the final demo with transparency features and a smooth onboarding experience.

Priority	ID	User Story	Story Points
1	US-4 .1	As a student, I want to see a clear activity log of everything Nodegent has done on my behalf so that I can trust the system and verify it is not acting out of its scope.	3
2	US-4 .2	As a student, I want to pause or revoke Nodegent's access to any connected system instantly so that I always have a	2

		clear “off switch.”	
3	US-4 .3	As a student, I want the Nodegent web app to be responsive and work well on a phone browser so that I can check my schedule on the go.	3
4	US-4 .4	As a student, I want clear documentation of the onboarding flow of how Nodegent works and accesses my accounts so I can use the product without worrying about security risk or confusion.	5

Sprint 4 Total: 13 story points

Sanity Check

Sprint	Story Points	Notes
Sprint 1	11	Primarily planning/docs, lighter workload
Sprint 2	17	Heavier but foundational (auth + frontend + data layer is a critical path)
Sprint 3	18	Largest sprint (AI integration + agent workflows are highest complexity)
Sprint 4	13	Polish + demo prep, wrapping up code
Total	59	

Team capacity estimate: 4 developers + 1 assistant developer (Pranay) x ~ 8 story points/sprint avg = 32-40 story points/sprint capacity. Sprints 2-4 work well with the proposed structure. Sprint 1 is intentionally light to account for setup, onboarding to software tools, and the expected initial learning curve for the team. Midterm weeks in sprints 2-3 are accounted for in tighter point estimates.

No external dependencies block the class prototype from accessing Canvas data, but both legal and software accessibility constraints will be taken into account for development.

Product Backlog

The following goals and stories were discussed but are subject to change beyond the class release. They represent the roadmap for Nodegent post-v1.0.

Deferred High-Level Goals:

- Multi-campus support (add new campus integrations as configuration, not rewrites)
- Native mobile app (iOS/Android) for easy, on-the-go access of Nodegent
- MCP server and REST API for technical users to connect their own AI agents

Deferred User Stories:

ID	User Story	Reason Deferred
US-B1	As a student, I want to connect my meal plan and dining hours so that Nodegent can include dining options in my daily plan.	Campus API availability uncertain (we could web scrape from existing UCSC dining menu site and is much easier)
US-B2	As a student, I want to see trends in usage patterns so that we can understand the most popular searches/requests made by other students.	Analytics infrastructure out of scope for class sprint timeline.
US-B3	As a student, I want to view gym occupancy/wait times so I can see the best time to workout.	There is no reliable API source.
US-B4	As a student, I want Nodegent to detect when I am falling behind in multiple classes so that I can adjust my workload early.	Requires predictive modeling and historical behavior analysis not part of MVP.
US-B5	As a student, I want Nodegent to suggest a detailed study schedule based on my upcoming deadlines and free time blocks so that I can plan day/week proactively.	May require schedule inference logic that could be difficult to implement in V1.
