

Definition of Done

Project: Nodegent — CSE 115A Spring 2026

Version: 1.0

User Story Definition of Done

A user story is considered **Done** when the following criteria are met:

Functional Requirements

- Acceptance criteria listed in the user story are met
- Feature works end-to-end in the app
- No major regressions introduced to previously working features
- Error states are handled — no unhandled crashes on the happy path

Code Quality

- TypeScript build passes (`npm run build`)
- No secrets or API keys hardcoded in source code
- No leftover debug statements in production code

Review

- Code reviewed by at least one other team member
- Branch merged via pull request

Testing

- Feature tested manually in the browser
- Tested on both desktop and mobile where relevant

Documentation

- README updated if the feature changes setup or usage
 - New environment variables added to `.env.example`
-

Sprint Definition of Done

A sprint is considered **Done** when:

- Committed user stories meet the criteria above
- Sprint review demo has been conducted
- Sprint retrospective has been held
- Sprint report is written and added to the repository
- main branch is in a working state at sprint close

Release Definition of Done

The release is considered **Done** when:

- All planned user stories are complete
- Release branch created with all documentation included
- Release Summary Document completed
- README reflects the final state of the product
- Final demo is ready for project review
