

Nodegent Style Guide

Project: Nodegent — CSE 115A Spring 2026

Version: 1.0

1. Code Style

Language & Framework

- TypeScript with React and Next.js App Router
- `.tsx` for components, `.ts` for utilities and types
- Avoid any types where reasonable

Naming Conventions

Item	Convention	Example
Components	PascalCase	AssignmentCard, DailySnapshot
Hooks	camelCase with use prefix	useCanvasData
Utilities	camelCase	formatDueDate
Constants	UPPER_SNAKE_CASE	MAX_RETRIES
CSS classes	kebab-case	assignment-card

Formatting

- 2-space indentation
 - Single quotes for strings
 - Prettier used for formatting — run before committing
-

2. Git Conventions

Branch Naming

feat/us-<number>-short-description
fix/short-description
chore/short-description

Commit Messages

feat: add Canvas sync polling
fix: resolve null due date crash
chore: update dependencies

- Present tense, imperative mood
- Keep subject line short and descriptive

3. React & Component Style

- Function components with hooks
 - Keep components focused — one job per component
 - Avoid prop drilling more than 2 levels deep
 - Use Server Components where no client interactivity is needed
-

4. Security

- No secrets or API keys in source code — environment variables only
 - All LLM calls made server-side
 - Validate user inputs at system boundaries
-

5. Testing

- E2E tests in /e2e/ using Playwright
- Test file naming: `<feature>.spec.ts`
- Cover the critical happy path per feature
